Turf Ground Booking System

Requirement Analysis, User Flow
& Product Approach

RoBenDevs

Md. Rahat Pervez

The Problem

“You call the turf — nobody picks up. You message on WhatsApp — and wait.”

- Bookings today: phone calls, Facebook, WhatsApp
- The team writes every booking by hand
- A message can be missed, or a slot promised twice

The turf has no single, reliable record of its own bookings.

Users & The Idea

Customer

Wants to play, needs a free slot

Owner

Runs the turf, sets the rules

Staff

Handles the counter, exceptions

My idea: a booking page that automates this manual work.

Like choosing a seat on an online bus ticket — you see what's free, and you pick.

My Approach: Requirements

Questions for the Owner

- Price & payment method
- Cancellation policy & timing
- Who enters phone bookings
- Website, app, or both language

10 questions in total, in the document.

Where I Couldn't Wait

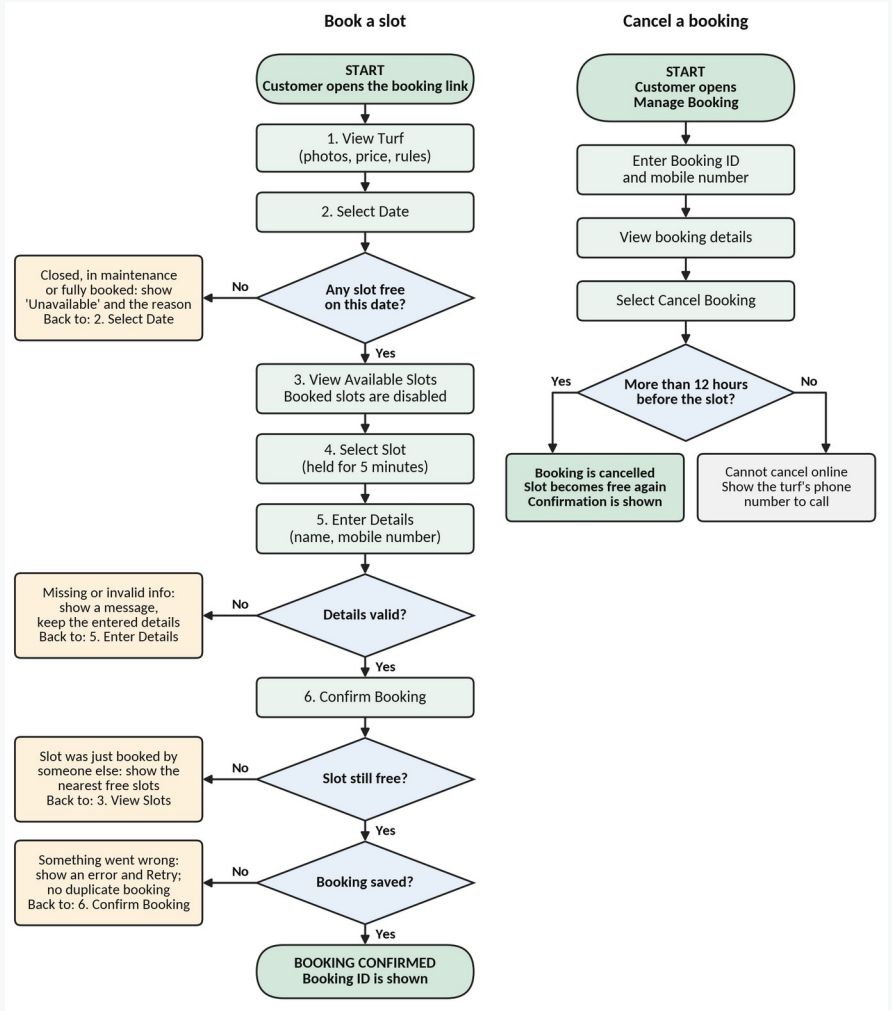

I made an assumption — clearly marked, ready to confirm with the owner.

Key assumption

Slot status is fully automatic — staff never update it by hand.

User Flow

Booking a slot, and cancelling a booking

Priorities — Smallest Version First

Must Have

Booking, cancellation,
and a basic admin page.

Should Have

SMS or WhatsApp,
and online payment.

Later

A second ground,
and more.

My question: what's the smallest version that removes the manual work?

Key Decision

Automate slot availability. Confirm bookings instantly — no owner approval.

Why: manual approval would bring the manual work right back.

The Trade-off

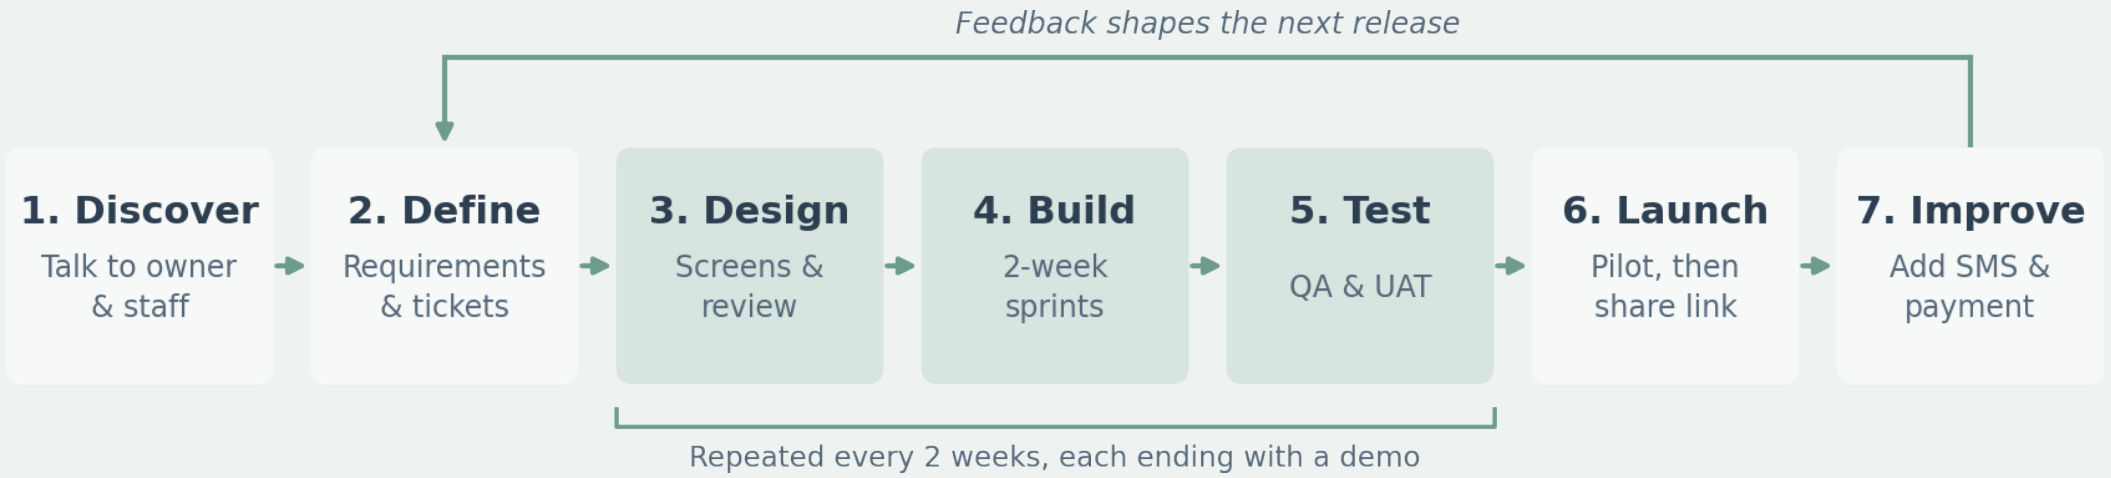

More engineering effort

to build automatic availability from day one.

Some no-shows possible

no payment up front — reduced with the mobile number and a cancellation rule.

Delivery: Agile, Two-Week Sprints

8 Jira tickets, broken down from the Must haves — reviewed with the engineers before each sprint.

Customer Journey

1

Open the link

From the turf's booking page

2

Pick a slot

Held for 5 minutes automatically

3

Confirm & pay

Get a Booking ID, pay at the turf

Cancellation

Booking ID + mobile number. More than 12 hours before the slot — cancel, and it's free again automatically. Closer than that — call the turf.

Main Features & the Edge Case

Main Features

- Live slot availability
- Quick booking
- No double booking
- Easy cancellation
- A simple admin page

The admin page only handles the manual jobs a system can't know — a phone booking, or blocking a slot for maintenance.

Edge Case: Double Booking

Two people try to book the same slot at the same moment.

At confirmation, the system checks the slot again.
If someone else got it first — nearest free slots are shown, details are kept.

Only one booking is ever saved.

Outcome & Success Metrics

No double bookings, and far less manual work.

1

Online share

% of bookings made through the system

2

Double bookings

Target: zero

3

Time to book

Under one minute

4

Manual calls

Fewer calls & messages for staff

5

No-shows

Tracked — decides when to add payment

It's one idea:

Automate the manual process.

Thank You
